

SMART INDIA HACKATHON 2026

SMART INDIA
HACKATHON
2026

TITLE PAGE

- Problem Statement ID – SIH26068
- Problem Statement Title- WeatherGPT: Conversational AI for Weather Forecasting, Alerts, and Climate Information
- Theme- Disaster Management
- PS Category- Software
- Team ID- 118709
- Team Name- Void Pointers

WeatherGPT: ask the sky, trust the answer.

IMD's forecasts in every Indian language, answered from servers in India.

IMD's forecasts, in your language. Every number comes with a receipt.

How it addresses the problem

Weather data is scattered across portals, bulletins, satellite products & forecast systems

One conversational interface: actionable insight in seconds

Generic AI chatbots invent forecasts, even warnings

Accurate: every value verified against IMD & NWP records

English-only, text-heavy portals shut out rural India

Voice-enabled & multilingual via Sarvam AI: 22 Indian languages

WeatherGPT

ગુજરાતી

Surat, Gujarat

કાલે સવારે સુરતમાં વરસાદ પડશે?

FORECAST RAINFALL

0.4 mm

Voice

INNOVATION & UNIQUENESS

Zero invented values: Satya Gate checks every number first.

IMD first: IMD's warnings, nowcasts & Mausamgram, beside global models.

Sovereign by design: open models, Indian servers; no question leaves India.

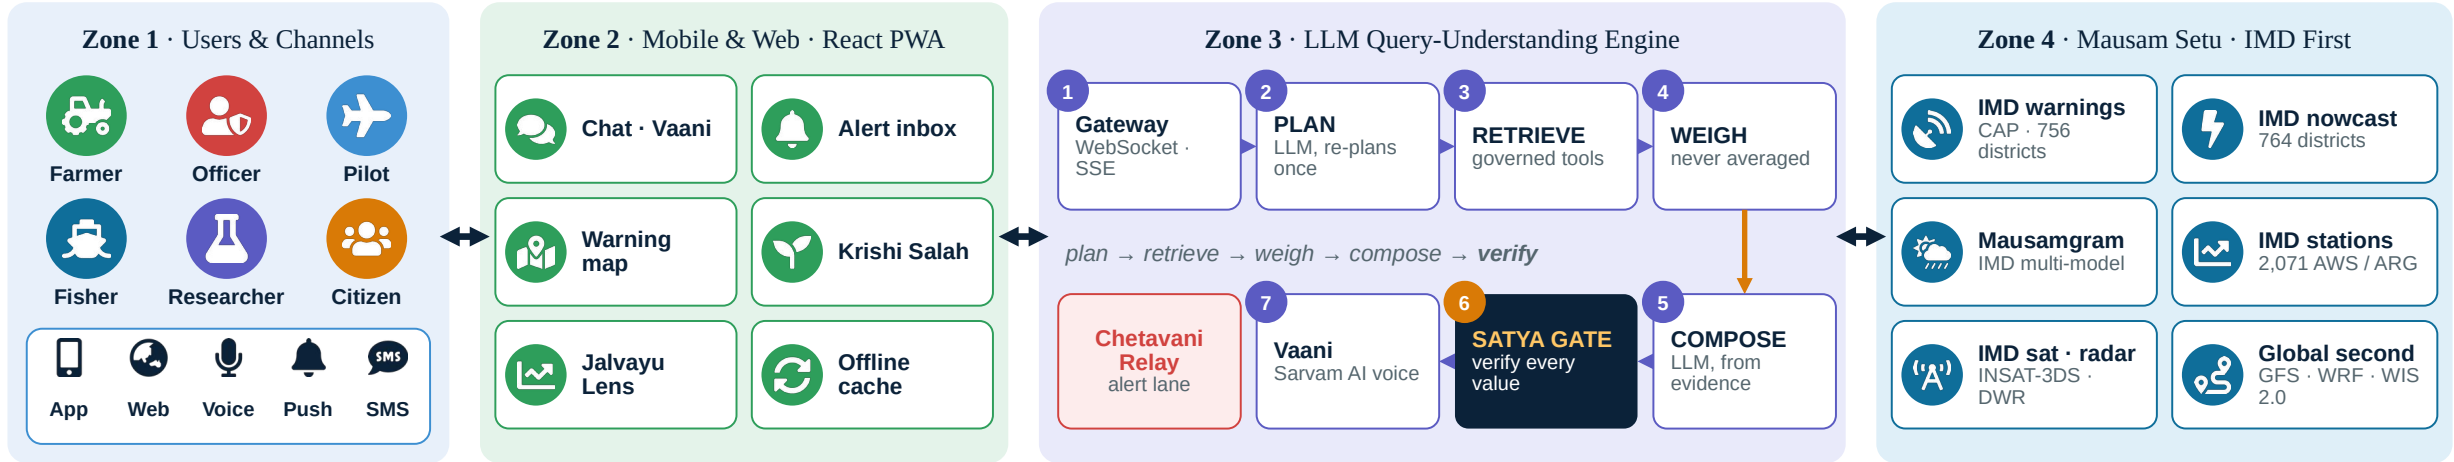

SEE IT LIVE

Scan or click QR

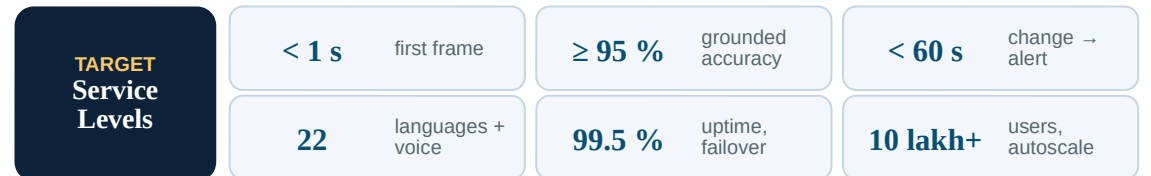

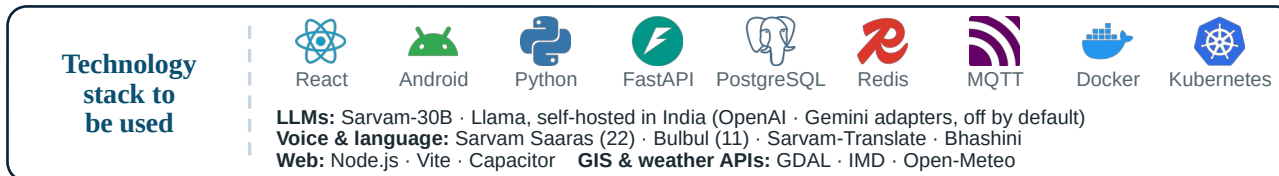

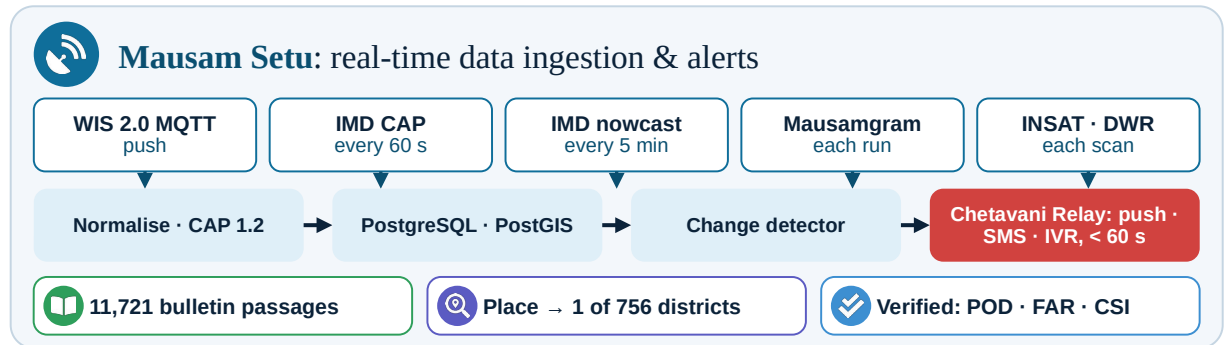

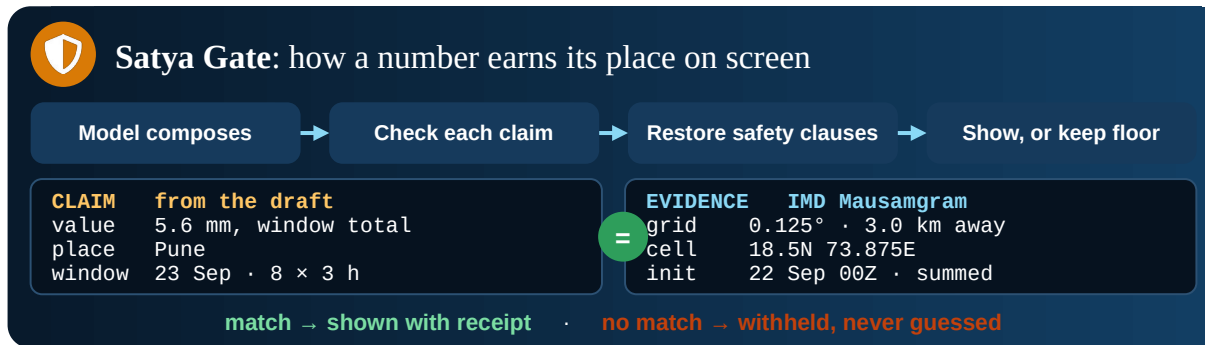

TECHNICAL APPROACH

Technologies to be used · Methodology and process for implementation

THE RULE THAT NEVER BENDS: the LLM plans and speaks; it **never** supplies a number, unit, place, time-window or warning level. Tools own every value.

FEASIBILITY AND VIABILITY

Feasibility analysis · Potential challenges & risks · Strategies to overcome them

Feasibility

90 %

of 306 live scenarios
answered from evidence

- **Proven, available tech:** open-weight Indian LLMs, IMD's own feeds, GFS / WRF, Sarvam speech.
- **Working prototype** today: **1,630 + 596** automated checks, a 21-step gate, **0 failed**.

Viability

100 %

hosted, processed &
stored in India

- **Sovereign & sustainable:** open-weight Indian models (Sarvam-30B) on IndiaAI / NIC compute, IMD-owned.
- Serves **Mission Mausam**; a **chat widget** for IMD's website, apps, UMANG & EOC portals.

Practical Implementation

90 days

to a Gujarat pilot:
every district, gu / hi / en

- **Scalable:** 1 state → every State / UT; **4.3 crore farmers** already get IMD agromet SMS.
- Low-end phones and 2G; day-one owner **IMD Met Centre + State EOC**.

Potential Challenges & Risks

- 01 AI hallucination:** an LLM may invent a number, or even a warning.
- 02 Data access:** IMD's APIs need credentials and approvals.
- 03 Connectivity:** patchy rural networks and feature phones.
- 04 Language fidelity:** translation can distort values and negations.
- 05 Foreign AI dependence:** outages, price shifts, questions sent abroad.

Satya Gate binds every value to a source record; unverified output is never shown.

Public routes to IMD's own data: Mausamgram, 764-district nowcast, 2,071 stations; API adapters switch on with a key.

Offline + SMS / IVR: last-answer cache, tiny PWA payloads, voice call-back.

Value-safe translation: Sarvam-Translate output re-checked for numbers, units & dates, else it stays in source.

Sovereign stack: self-hosted Indian models, a rule-planner floor, zero foreign data egress.

Strategies for Overcoming Challenges

SOVEREIGN Deployment

NATIONAL CORE
IMD / NIC MeghRaj: models, data, audit logs

STATE NODE
State Data Centre + SEOC: languages, alert relay

DISTRICT EDGE
offline node at the DEOC: answers when links fail

CITIZEN DEVICE
PWA cache · SMS · IVR, no data plan needed

STATE-SCALE COST
≈ ₹26 lakh / yr

Biggest line: **2 × H100** inference on **IndiaAI compute** at ₹150 / GPU-hr, 24 × 7. No per-question foreign API fees.

**DATA STAYS
in India**

DPDP Act 2023
district-level location only

CERT-In 2022
logs kept 180 days in India

MeitY cloud
empanelled, India region

Open standards
CAP 1.2 · WIS 2.0 · WFS

NOW
IMD-first answers · installable PWA · streaming

BEFORE FINALE
Live push on a phone · WIS 2.0 lane · WRF

36-HOUR FINALE
SMS / IVR · cyclone-bulletin OCR · IMD API adapters

90-DAY PILOT
Gujarat · all districts · 3 languages

FUTURE SCOPE
WhatsApp bot · panchayat-level forecasts · AI nowcasting · impact-based warnings

IMPACT AND BENEFITS

Potential impact on the target audience · Social, economic & environmental benefits

99 %

of days in Jan–Sep 2025 saw extreme weather in India
Source: CSE 2025 >

4,064

lives lost in those nine months, up 48 % in four years
Source: CSE 2025 >

9.47 M ha

of crops hit, four times the 2022 figure
Source: CSE 2025 >

₹12,500

yearly gain per rain-fed farm household using advisories
Source: NCAER 2020 >

PS OUTCOMES

✓

Faster dissemination of weather information

✓

Improved public accessibility to forecasts

✓

Better disaster preparedness & response

✓

Decision support for agriculture, aviation, marine & urban planning

Farmers: crop-weather advisories at the right hour to spray, sow and irrigate, spoken in their language.

Disaster Managers: flood & cyclone warning dissemination by district: what changed, plus a forwardable brief.

Smart Cities & Urban Planners: smart city weather monitoring: heat, flood risk and air quality.

Aviation & Marine: aviation weather briefing (METAR / TAF); RSMC sea-area & coastal warnings for fishers.

Researchers & IMD: climate analytics for researchers: a century of records, plus what India asks.

Benefits of the Solution

Social

IMD's forecasts reach the **last mile** in 22 languages through **Sarvam AI** voice, SMS & IVR. **Trust** grows when every alert traces to IMD.

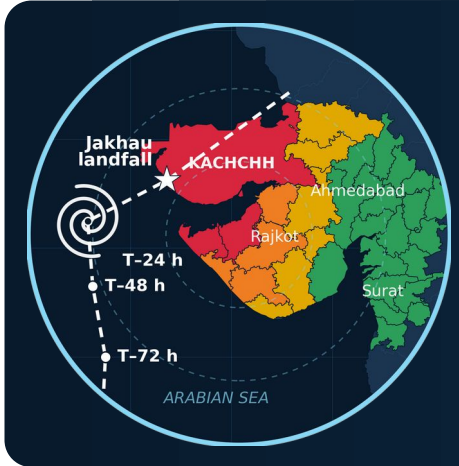

Economic

Advisories are worth **₹12,500 a year** to a rain-fed farm household; run on **Indian government compute**, no foreign fees.

Environmental

Weather-timed spraying & irrigation cut wash-off and water waste; open records power **local adaptation** (SDG 13 · 2 · 11).

DISASTER-DAY STORYBOARD: 72 hours of a cyclone

no warning

watch

alert

warning

Illustrative, modelled on Cyclone Biparjoy (Kutch, June 2023): IMD's warnings moved 1 lakh+ people to safety

T – 72 h

Yellow watch

A farmer asks by voice and hears the rain window plus IMD's own advice: harvest early.

Sarvam voice · Krishi Salah

T – 48 h

IMD raises Orange

The change reaches every subscribed phone in the district within a minute by push, SMS and IVR.

Chetavani Relay

T – 24 h

Red warning

The district officer pulls a what-changed brief with its source and forwards it to every taluka.

Pramaan Receipt

T – 0

Landfall

Networks choke: the cached last answer and the IVR line keep working; fishers hear the RSMC sea-area warning.

Offline cache · IVR

T + 24 h

Recovery

Relief teams ask for rainfall totals and river discharge; every figure comes with its source and time.

Mausam Setu · Jalvayu Lens
